ROOFING**

SWIMMING POOLS / SWIM SPA / HOT TUBS

# Changing the way we look at pool covers

## Design linked to efficiency

We design and implement design roofing for swimming pools. For each order we emphasize the high quality of the materials used, precise execution, attractive appearance, spatial possibilities of the garden and at the same time we pay attention to the ideas and requirements of our clients.

Pool roofing should not be distracting, on the contrary, it should connect the visual concept of the house with the garden concept, be sophisticated and make the owners happy.

Since 2016, we have been producing attractive mobile pool covers that also serve as a terrace. This way, the space is used as efficiently as possible and nothing obstructs the view of the garden.

Development is absolutely key for us, which is why we are constantly discovering new materials, improving our product and looking for new challenges to drive us forward.

# Product lines

Slide Wood design roofing that protects your pool and hot tub with elegance and functionality. The BASIC range offers a reliable and affordable solution for any pool, the PREMIUM range delivers luxury design and superior quality, while the THERMO range is specifically designed for swim spas and hot tubs where it provides maximum thermal insulation and comfort.

**Quality, style,  
economy - all in one.**

The Slide Wood BASIC pool roofing is the ideal choice for customers who are looking for a timeless and aesthetically appealing feature for their garden, while not requiring a lot of fuss and prefer great value for money. The design is made entirely from aluminium and is complemented by stainless steel components, including high-load wheels and fasteners. This ensures that the roofing is ideal for saltwater pools.

Polycarbonate is sandwiched between the profiles, which not only provides excellent insulation properties but also helps to effectively drain water and dirt from the surface of the cover. Insulating foil strips on the sides ensure a tight seal, preventing dust and leaves from getting under the pool cover.

The standardised Slide Wood BASIC roofing is manufactured for swimming pools from 4×2 to 6×3 m in 1 large segment or up to 3 smaller segments that slide into each other.

For the finish, you can choose from three decorative FunderMax planks imitating the look of wood, which are known for their high durability and can withstand even the harshest conditions, or opt for a natural lawn look thanks to the artificial carpet.

## A pool roofing that turns into a terrace.

The Slide Wood PREMIUM pool roofing is a timeless roofing with a wide range of material and design options. Thanks to the sloping surface, it not only provides protection for the pool, but also a practical use of space.

The construction is made entirely of aluminium and is complemented by stainless steel components, including high-load wheels and fasteners. This ensures that the roofing is ideal even for saltwater pools.

Polycarbonate is sandwiched between the profiles, which not only provides excellent insulation properties but also helps to effectively drain water and dirt from the surface of the cover. Insulating foil strips on the sides ensure a tight seal, preventing dust and leaves from getting under the pool cover.

The number of sliding parts depends on the size of the pool. You can choose one large piece, two pieces that slide together or three that slide into each other.

The range of surface materials is very varied. You can choose the popular WPC patio boards, natural wooden patio boards, stone slabs or artificial grass carpet.

## Walking cover with perfect insulation.

Discover the Slide Wood THERMO range that takes insulation to a new level! It offers all the features of the PREMIUM range, including surface materials, plus a two-stage thermo-insulation system.

Treat yourself to the highest level of insulation and comfort for your relaxation space.

- Maximum energy savings - advanced insulation minimises heat loss and reduces water heating costs.
- Walk-in design - a solid and secure roofing that you can safely use as a walk-in area.
- Perfect protection - UV impermeability and, thanks to insulation strips around the perimeter, also prevents the ingress of dirt and keeps the water at an optimal temperature.
- Compact and durable design - total roof height of just 230 mm+.

REALIZATIONS

# Staré Hradiště

The connection of the whole garden concept stands out beautifully in this realization.

When planning the pool roofing, it was envisaged to create a shaft into which the cover would go. When the cover is removed, the pool itself stands out and when it is covered, the garden as a whole is perfectly formed. The rock garden, which is created above the cover shaft, adds an imaginary crown to everything.

roofing material is used  
**Siberian smooth larch**

REALIZATIONS

# Pardubice

The pool roofing in this implementation consists of two segments, with the smaller segment going into the larger one.

Again, it shows how the roofing fits in with the garden concept and connects the nature around with the modern design of the house. The homeowners also use the sliding roofing as a sun terrace for relaxing or sitting with friends. The design of the roofing is accentuated by the exotic garapa wood.

Garapa wooden terrace planks are used as roof lining.

REALIZATIONS

# Velké Pavlovice

## One-piece pool terrace in XXL format

This classic Provençal-style gem was one of the biggest challenges in SlideWood's history. Despite its enormous dimensions of 11.40 m × 6.55 m, this structure can support a surface load of 120 kg/m<sup>2</sup> and a total load of up to 480 kg (plus 20 cm of snow). With these dimensions, this pool roofing offers plenty of space for sun loungers and invites you to lounge overlooking the vineyards.

is used as a roof lining

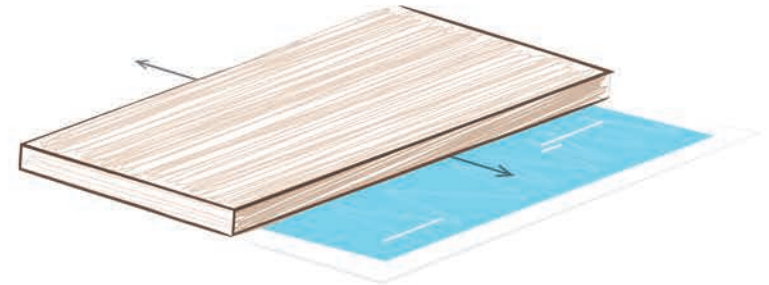

# Roofing types

## for swimming pools

The total number of sliding parts depends on the size of the pool. For example, you can choose one large sliding part to form a complete system with a terrace around the pool. There are also two parts that slide into or away from each other, or even three parts that slide into each other.

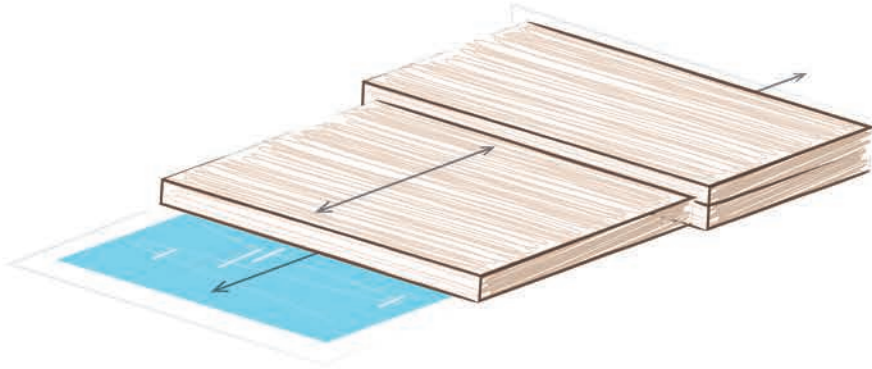

01 one segment with offset behind the longer side

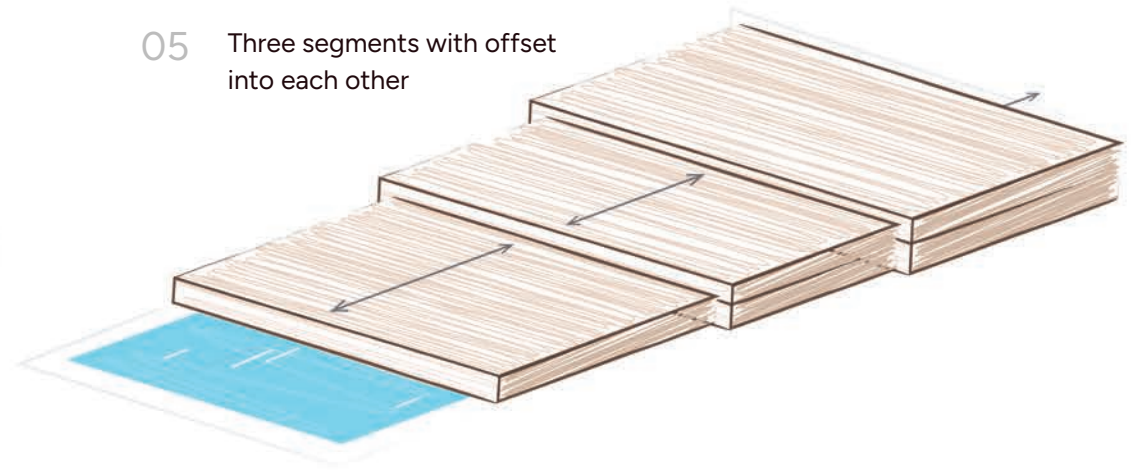

02 one segment with offset behind the shorter side

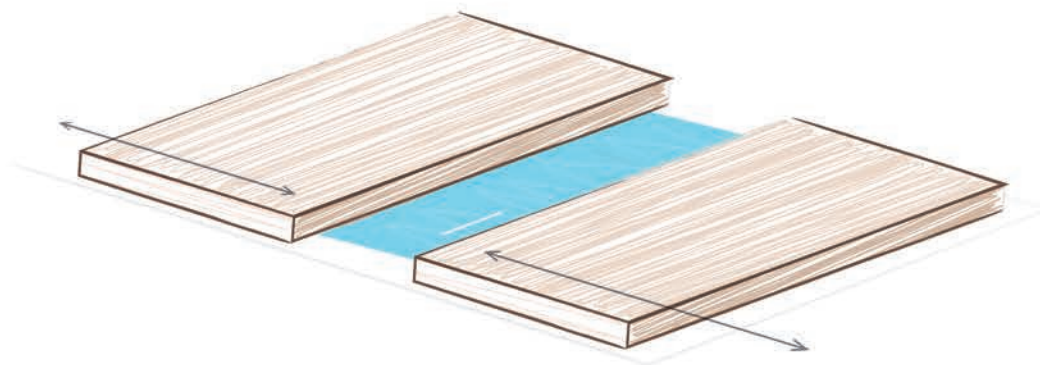

03 two segments with offset into each other

05 Three segments with offset into each other

04 two segments with offset from each other

#### ROOFING TYPES

### for swim spas and hot tubs

In order to be able to offer our clients a designer roofing for swim spas and hot tubs, we have developed a special thermal insulation system. Inside the structure there are thermo-insulating PUR panels, which are then hermetically sealed with aluminium plates. Underneath the structure, around the perimeter of the enclosure, there is a two-stage insulation system that prevents evaporation of water and heat from escaping from the swim spa or hot tub.

# Technical specifications

## 01 Range of construction

when using the standard profile 120" / 140" max. 4 000 / 5 400 mm  
 when using high strength profile 220" max. 8 300 mm

## 02 Height of roofing

when using the standard profile 120" / 140" +- 180 / 200 mm  
 when using high strength profile 220" +- 285 mm

## 03 Rails (aluminium)

height 14 mm  
 width 50 mm

## 04 Stainless steel high load wheels

maximum load 400 kg

## 05 Insulation (water drainage)

pylocarbonate desk 6 mm

## 06 Drive (roofing shift)

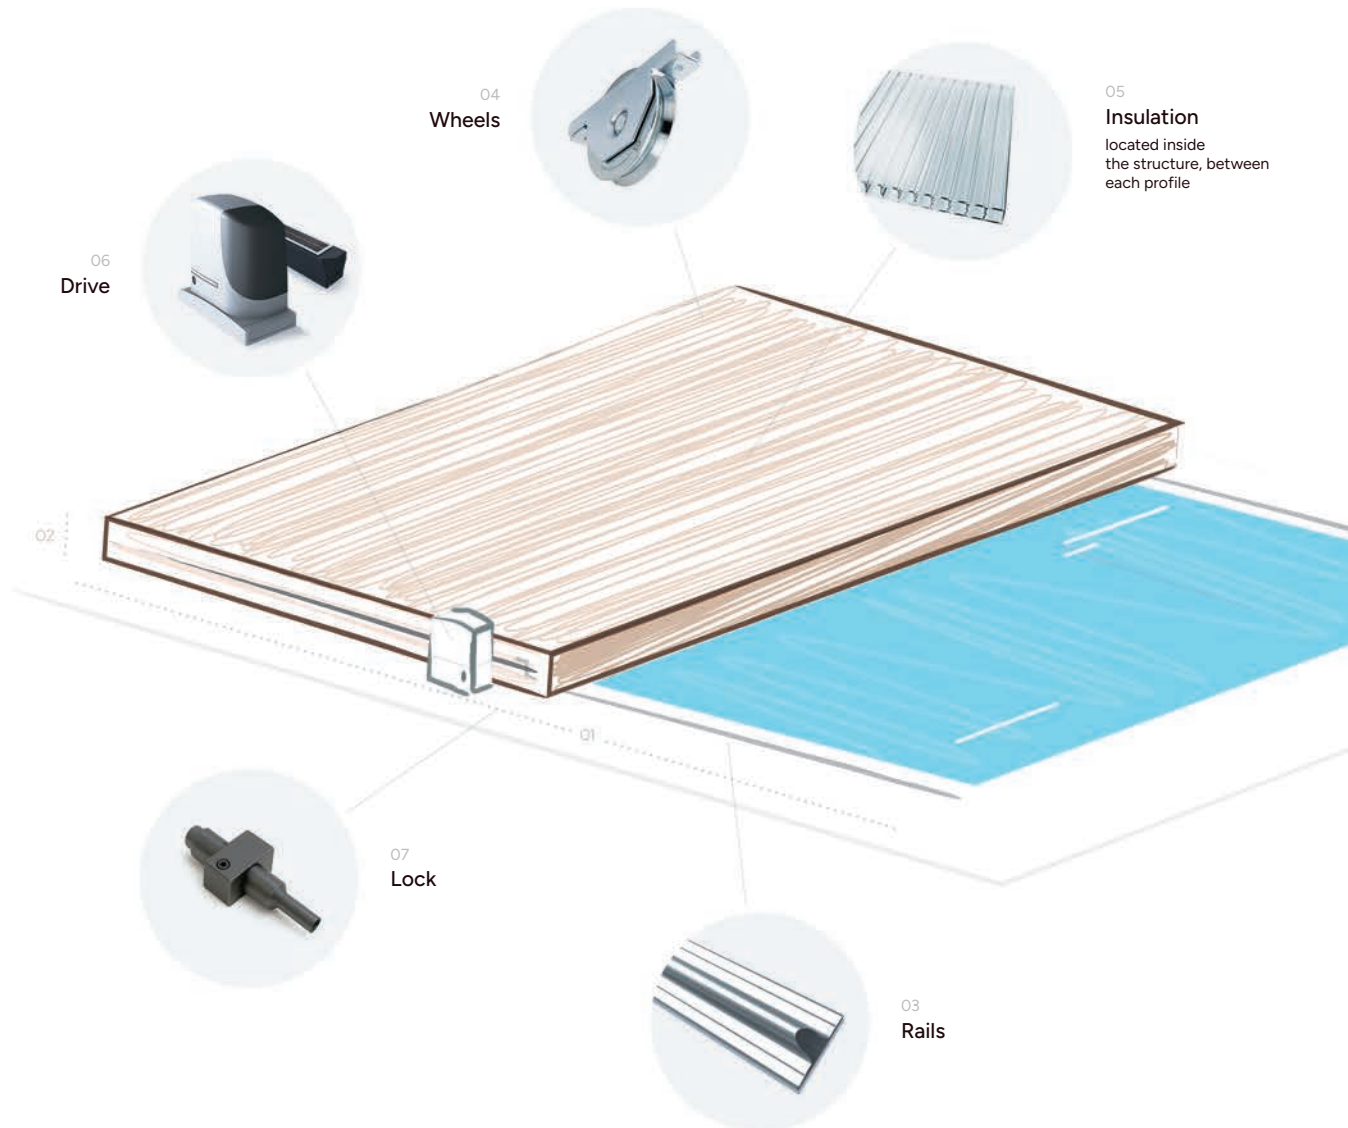

standard gate motor (Nice)  
 solar motor (Unicum)  
 (both motors are remote controlled and can be controlled by a smart home)

## 07 Security

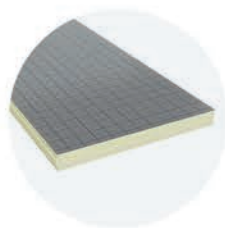

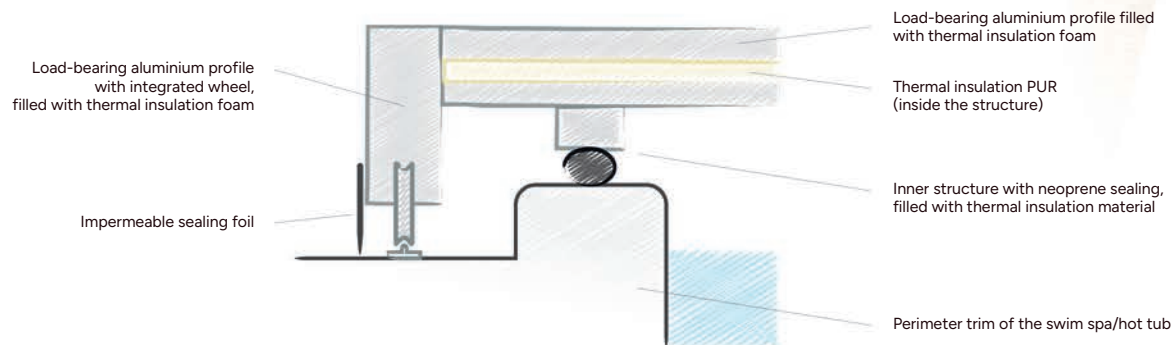

lock with the key

## Weight load

maximum point load on the cover surface 120 kg/m<sup>2</sup>  
 maximum load over the entire surface of the cover 480 kg  
 (included 20cm wet snow on top of roofing)

## Thermal-insulation system for swim spas and hot tubs

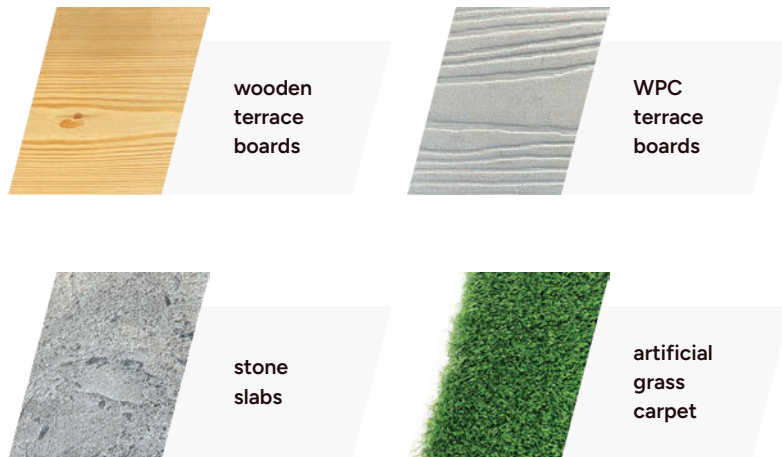

**Thermal insulating PUR panel**  
placed inside the cover structure, designed for swim spas and hot tubs

# Surface materials

The range of materials is very varied.

You can choose your favourite WPC patio boards, natural wooden patio boards, stone slabs or artificial grass carpet.

## SURFACE MATERIALS

# Natural wooden patio boards

A very popular, and at the same time the most commonly used material for our pool covers, are terrace boards made of wood.

Thanks to the variety of wood species, every pool owner can choose exactly the boards that suit them best. You can choose from the more familiar species such as Czech or Siberian Larch, but also exotic woods such as Bangkirai, Massaranduba, Garapa, IPE, Teak and others.

All patio planks are available in both smooth and grooved finishes and we will also recommend the appropriate oil for the maintenance of each type of wood. This oil is again available in several shades.

Garapa

Bangkirai

Siberian larch

SURFACE MATERIALS

# WPC terrace boards

You can choose from a wide range of colours. Whether it's a variety of natural shades, the look of ceramic tiles or concrete, we can provide it for you. In addition, you can choose whether the planks are sanded for a more natural wood look, textured, grooved or smooth.

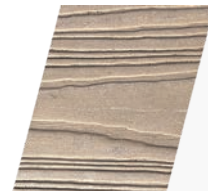

So it's really up to you which type of planks you choose for your pool roofing. We work with leading suppliers, which means we can provide you with the highest quality WPC patio boards on the market.

# Stone slabs

Stone slabs are an absolute novelty of our company. It is a real stone, which is processed and manufactured in India. By working with Rockfoil for many years, we have achieved the creation of this surface material for our roofing, giving a much more varied choice and authenticity of natural material. The stone slabs are coated with a special varnish so they are fully walkable and the format of the slabs is highly variable, which means even more possibilities and originality for each client. The colour variety is very wide.

# Emphasis on Quality and Innovation

Slide Wood has been certified by ČSN EN 1090-1 and ISO 9001, which is a guarantee of high product quality for the client.

The quality of the materials used and the work done is absolutely essential for us. To ensure that we always maintain the highest standards, all of our components are certified to ISO 9001-2015.

At the same time, we are dedicated to innovation. We have our own patented high strength AL profile EN AW6063-T6. We have developed a sealing system for the perfect closure of enclosures, especially for swim spas and hot tubs. We have also developed our own Slide Wood DRAIN system to drain water from the cover surface, so that water and dirt back ingress is minimal. We have also developed our own Slide Wood LOCK locking system to withstand the heavy weight of the covers.

We want to continue to improve our service in the future, which is why we are constantly improving our existing design, using more sophisticated actuators and discovering new surface materials.

## We aim for an individual approach

Client satisfaction is our first priority. That is why we personally go to the place of realization for each order, manually measure everything and discuss the customer's ideas in detail. The customer can choose how the roofing will look. From the screws used, to the material chosen, to the overall appearance. Before the roofing leaves our factory, we test it thoroughly.

We assemble the complete roofing in our workshops, including the rails, and test the overall functionality. Only when we are sure that everything is in perfect order do we take the cover to the customer.

# The main advantages of Slide Wood pool roofing

- 01 Fully walkable roofing, also serving as a terrace
- 02 Design connection between garden concept and house
- 03 Perfect for use in small gardens
- 04 No overheating of the pool water
- 05 Safety for children and pets
- 06 Less maintenance of water quality due to UV impermeability

# Service program

The goal of this program is to ensure the best possible functionality of your roofing and to prevent any problems caused by the continuous wear and tear of the pool roofing.

Our expert technician will inspect the entire roofing, check all screws, bolts, locking, sealing rubbers, the condition of the wooden or WPC boards, test the running of the cover and make an overall analysis based on all the information.

If the technician discovers a defect, he will explain the nature of the defect on the spot and recommend a course of action to correct it. Before any service intervention, always agree on everything first and agree on the necessary intervention.

# Partners

As crucial as the relationship with our clients is for us, our partners are equally important for our company.

We choose carefully who we want to work with because quality materials, reliability in delivery and mutual trust are of the utmost importance to us. We highly value our partners and look forward to continuously developing on a partnership level.
